

Ecological Services

Ecological investigations usually take place as part of the planning / site development process. Ecological survey work provides various data about a site, from baseline botanical & landscape information and mapping, to detailed information on the presence of protected plant and animal species.

Crestwood Environmental has specialist consultants trained to provide an ecological investigation service, at whatever level you require. This service is carried out to industry standards and in compliance with Local, National and European Wildlife Legislation and is tailored to meet the needs of each site.

Crestwood offers a range of ecological services including:

- Extended Phase 1 Habitat Survey and Mapping
- Protected Species Surveys, including Bats, Badgers, Water Voles, Otters and Great Crested Newts
- Invertebrate Surveys (Terrestrial and Aquatic)
- Hedgerow Surveys
- Habitat & Site Management Plans
- Mitigation Plan Design & Development
- Restoration plans
- Habitat Creation

Whatever the reason for Ecological monitoring, Crestwood Environmental can provide on-site monitoring which results in the production of a professional report that meets the needs of the site operators and relevant authorities. If you require any information or advice, please contact us on the number below.
